

How much money could you save; if one piece of machinery could do the work of three or four?

Introducing the 'Swiss army knife' of farm machinery...

Don't you hate the fact that hundreds of thousands of dollars worth of machinery sits in your shed for 90% of the year?

Sure, for the few weeks a year you use it, it earns its keep. But it just doesn't feel right, does it? All that money tied up, just sitting there, costing you money to pay off, bank manager breathing down your neck... I mean farming is all about profitability, so you can retire in comfort and know the kids are taken care of. So it's about time someone introduced multi-use gear, it just makes damn good financial sense.

Let me explain... You see, the Grain King Seed & Super Chaser Bin is a seed & super bin at seeding time and a chaser bin and fire fighting unit at harvest. It can even be used as a fertilizer field bin when you are spreading fertilizer and as a sheep feeder.

OK. So let's do the sums. If you have a truck mounted seed and super set up, you have the cost of a suitable truck, then you have the cost of the seed and super bin, separate firefighting unit and sheep feeder, and the numbers start to get scary...

And that's before you take into account the cost involved in keeping all that gear maintained. Not to mention the cost of that new shed you now have to build to keep it all in!

"We have two 30T Grain King Seed & Super – Chaser Bins. They hold enough seed and super for 12 hours and now it takes only 5 minutes to fill our 2320 instead of 30 minutes as with our old system, which then allows us to seed an extra 15 hectares a shift".

Now let's look at what you get when you invest in a quality Grain King Seed & Super-Chaser Bin...

Fully hydraulic driven, with convenient in-cab and auger mounted controls for easy push-button control of unloading. No manhandling required makes the work day easier and less tiring.

The twin, 12 inch augers have stainless steel barrels, which means rust won't be an issue, which cuts your maintenance costs. No more replacing poly liners.

Fills your seeding rig fast, in only five minutes. It is capable of doing 7T/min (See testimonial.) This means you get more crop in the ground in one day. And, I don't need to tell you, that finishing your seeding program earlier has definite financial advantages as your crop gets going quicker.

Large 30 tonne capacity means you have to fill it less frequently during seeding, saving you valuable time.

Tough, brand new, 29.5 x 25 inch earth moving tyres give excellent flotation in sandy soils and are purpose designed to handle the weight, far better than tractor tyres, due to their heavier ply rating.

The heavy duty single axle set up allows for easy manoeuvring and flotation. Unlike a truck mounted seed and super setups, it next-to-never gets bogged. Giving you more

choice as to where you can travel in paddocks that have difficult terrain.

Many have chosen the tandem axle option for further peace of mind in the fact that there are more wheels taking the weight. This is a proven European design which has a rear steerable axle giving you that extra ability to manoeuvre.

The tough, full length roll tarp seals your bin from the elements, as do the self closing weather caps that cover the

auger mounts automatically when you fold the augers down.

Hydraulic sweep augers allow you to shut them off for easy clean out, of the discharge augers, to fold down for transport. You can also control the rate of flow of grain and fertilizer.

Top quality, two pack paint finish means less chance of corrosion.

Ladders front and back give easy and safe access.

Conveniently placed peep holes make checking of your load levels easy from your tractor or from the side.

Flexible, removable 'elephant trunks' allow you to easily direct grain where you want it, fill your seeder or truck easily and evenly.

Auger mounted floodlights turn night into day, lighting up your working area clearly for safe night time filling and unloading.

Unique low profile means a lower centre of gravity, reducing the risk of rollover and gives you the ability to park it away in your smaller sheds.

Optional fire fighting unit, made up of twin 400 litre poly tanks hooked up to a quality fire fighting pump and 25 metre hose reel, means you can put out a fire quickly.

So at the end of the day, you get a top quality piece of gear that you can use as a seed and super bin, chaser bin, fire fighting unit, fertilizer field bin and sheep feeder. All that flexibility for only \$147,125 including GST, (\$112,310 if you don't want the fire fighting and tandem axle option).

12 month, unconditional warranty gives you peace-of-mind, knowing you are getting a top notch, top quality piece of gear that can take the pressure of 30 tonne belting around your paddocks. And any little thing we will fix for you, at our expense.

"We find having a relationship with Trufab a real benefit. Any machinery problems and they fix it for us and we end up with gear that really suits how we want to farm. It's got to the stage where we wouldn't consider going elsewhere. And they benefit too, by making the changes to their gear that we give them feedback on. You certainly can't question the quality of the Grain King gear"
